AVIATION SAFETY AUDIT SERVICES

CUSTOMISED AUDIT SOLUTIONS FOR AVIATION RISK MANAGEMENT

SGS AVIATION SAFETY AUDIT SERVICES

Auditing the aviation providers for your operation helps you to manage and minimise the risk of an accident, thereby protecting your personnel from harm, your operation from unscheduled downtime and your company from financial risk.

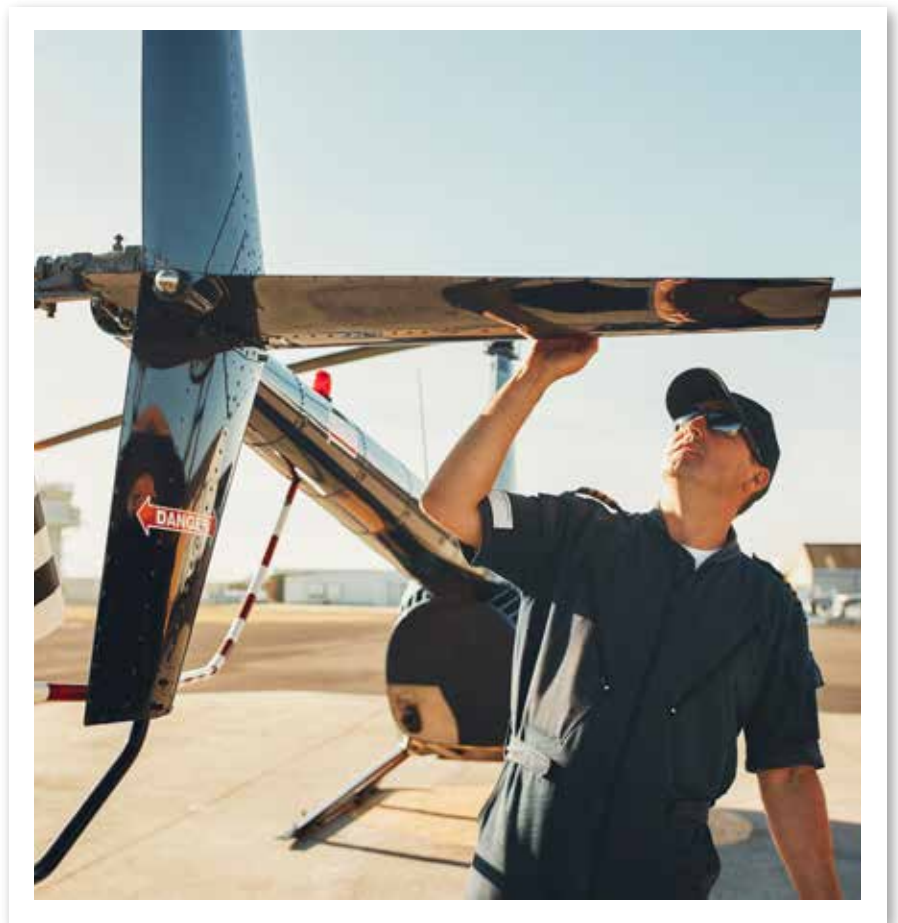

SGS HART Aviation is a world leader in managing aviation risk through auditing and the application of proven safety principles. Through an audit process we identify areas of non-compliance and classify them to enable trend analysis. We can then ensure that areas of concern are identified, appropriate remedial actions are chosen and documented, and provide oversight of their implementation. In addition to company specific planning, we monitor risks across the industry and include an examination of those areas during aircraft operator audits. We offer comprehensive aviation consulting and assessment services to give you the support you need – wherever your operations are in the world.

INDEPENDENT AVIATION SAFETY AUDITS

Auditing of aviation operations and facilities is an integral part of any Aviation Risk Management process. Auditing aircraft operations reduces the risk of an accident by ensuring operators are delivering a safe, efficient and reliable service.

We have extensive experience auditing and advising on:

- Charter operations
- Regular Public Transport (RPT) operations
- Offshore helicopter operations including marine pilot transfer
- Airborne geophysical surveys
- Helicopter external load operations
- Aerial photography operations
- Remotely Piloted Aircraft Systems (RPAS)
- Powerline inspections and line maintenance work
- Emergency Medical Services (EMS/ Medivac)
- Accident/incident investigation

Onsite operational safety and technical audits of operators are conducted against relevant legislation, industry best practice, and to your own aviation standards. We can audit individual operations, or manage an aviation audit programme on your behalf.

SGS HART Aviation conducts third party and customised audits, as well as internal audits. We also go further than a simple compliance audit and make recommendations for improvement, based on our extensive experience in the industry. Additionally, we provide post-audit follow-up over the course of the audit approval, to ensure that any recommendations made as a result of the audit are acted upon and closed out.

CUSTOMISED SOLUTIONS

SGS HART Aviation provides audit services according to the unique needs of each of our clients, across many different industries. We encourage clients to include additional items in the scope of audit in order to take maximum advantage of the process. The scope is discussed with our clients prior to an audit taking place, to ensure we capture each operator's specific requirements and focus the audit accordingly.

Sound aviation contractor performance can be verified by reviewing contract compliance, taking into account the suitability of aircraft and their equipment fit, the condition of aircraft on contract, including spot checks of aircrew experience on contracted flights, the analysis of JSA for the mission or route to be flown, ground crew training (where applicable), review of incidents, discussion of passenger concerns among other issues.

BARS AUDITS

The Basic Aviation Risk Standard (BARS) Programme is a joint initiative between the Flight Safety Foundation and the resources and mining industry to standardise auditing practice amongst its member organisations. BARS Member organisations include some of the largest mining companies in the world, in addition to non-profit organisations such as the UN World Food Programme.

SGS HART Aviation is an accredited and experienced BARS Audit company. With the largest number of trained auditors in the world we offer a rapid, efficient means to gaining BARS certification and accessing the larger aviation market that it makes available.

We can help you achieve certification expediently, gain competitive advantage and add value to your offering to the resources and mining industry.

WHY SGS?

SGS is recognised as the benchmark for quality and integrity. We employ over 85,000 people globally and operate a network of more than 1,800 offices and laboratories around the world.

Enhancing processes, systems and skills is fundamental to your ongoing success and sustained growth. Our audit, consulting and training services enable you to continuously improve, transforming your services and value chain by increasing performance, improving quality management, minimising and managing risks, better meeting stakeholder requirements and delivering extra value.

Each year, we carry out in excess of 500 aviation audits, reviews and inspections, all over the world, and our clients benefit from the resulting wealth of experience. This extensive auditing and advisory work, strong client base, knowledge of aircraft operators and of specialist flying roles all over the world, together form the industry benchmark for safe, efficient aviation services.
